Summary

Software Engineer with 4+ years of experience in developing applications using **.NET and Golang**, specializing in **performance optimization, scalable backend systems**, and **low-latency data processing**. Experienced in collaborating across cross-functional teams (architecture, QA, and business process analysts) to translate complex requirements into **efficient, scalable, and maintainable technical solutions**.

Work Experiences

.NET / Golang Developer — Astra International Tbk August 2025 - Current

1. Addressed performance bottlenecks in large JSON object parsing by designing and implementing a **high-performance JSON streaming helper in Golang**, increasing key-value extraction efficiency by **60%**, reducing memory usage by **35%**, and improving throughput by **2.5×**.
2. Reduced frequent requirement misalignment across **4+ cross-functional teams (Architecture, QA, BPA, Backend)** by leading early technical walkthroughs and improving documentation clarity, cutting clarification cycles by **45%**.
3. Improved backend integration reliability by enforcing early requirement validation and continuous cross-team communication, reducing requirement mismatches from **10 to 2**.

Environment: .NET, Golang, MongoDB, REST/Webhook Integration, Jira, Agile, Git, Team Foundation Server (TFS), Playwright, Behavior-Driven Development

Quality Assurance Support — Projectsprint.id June 2025 - August 2025

1. Reduced automated test script maintenance overhead by improving script structure and removing redundancy, cutting maintenance time from **5 hours/week to 4.5 hours/week**.
2. Improved regression stability by identifying flaky steps early and strengthening validation logic, decreasing broken-step occurrences from **14 to 10 per sprint**.

Environment: Manual & Automated Testing, Regression Testing, Test Script Maintenance, Agile, Collaboration Tools, Gherkin Cucumber, Behavior-Driven Development

.NET Developer — PT 360 Solusi Teknologi March 2025 - June 2025

1. Reduced code duplication by **5%** by refactoring modules and consolidating shared logic across multiple components, improving maintainability.

2. Accelerated team onboarding by restructuring documentation and code organization, reducing new developer ramp-up time from **5 days to 4 days (20% improvement)**.

Environment: C# (.NET), MVC Architecture, RESTful APIs, MS SQL, Git, Clean Code Practices

Freelance Software Developer — PT Adaya Solusi Teknologi March 2025 - May 2025

1. Addressed slow processing of large documents by optimizing dependency usage and content processing logic for **250-page documents**.
2. Reduced average processing time from **~10 seconds to ~6 seconds (~40% performance improvement)**, improving overall system responsiveness.

Environment: C# (.NET), Dependency Optimization, Large Document Processing, Performance Profiling

Fullstack ASP .NET Developer — PT Adaya Solusi Teknologi March 2024 - March 2025

1. Improved front-end responsiveness by addressing inefficient content processing and data retrieval, reducing NIP from **>500ms to ~100ms (~90% improvement)** through targeted jQuery refinements and removal of unnecessary animations.
2. Optimized **Largest Contentful Paint (LCP)** from **~4s to ~2s** by implementing image compression, preloading critical assets, and reducing render-blocking content.

Environment: ASP.NET, C#, JavaScript, jQuery, HTML, CSS, MS SQL, Performance Optimization, Web Performance Metrics (LCP)

• **Career Break** June 2023 - February 2024

1. Assisted family responsibilities while continuing professional development in software engineering.
2. Deepened expertise in **Rx.NET**, **advanced C# concepts**, **refactoring techniques**, and **software architecture** through focused study (Manning Publications, Refactoring Guru, O'Reilly).

Environment: Rx.NET, Advanced C#, Software Architecture, Refactoring Practices, Technical Literature

WPF Desktop Developer — PT Electrindo Inti Dinamika November 2022 - June 2023

1. Addressed real-time processing performance constraints by optimizing an **Rx.NET streaming pipeline**, maintaining CPU usage within **0.5%–1.5%** while handling **50+ concurrent real-time objects**.
2. Stabilized update intervals at **1.6–1.9 ms** with jitter consistently below **0.3 ms**, ensuring zero missed updates.
3. Ensured long-running system stability through stress testing, maintaining memory usage below **30 MB** over a **1-hour continuous run**.

Environment: C#, WPF, Rx.NET, Real-Time Data Processing, Performance Profiling, Memory Optimization

1. Reduced user error rates from **30% to 10%** by simplifying input workflows, optimizing process steps, and implementing real-time validation.
2. Maintained an average troubleshooting resolution time of **1 man-day (9 hours)** per case, including **0.5 man-days (4.5 hours)** of on-site issue handling.
3. Led **3+ on-site deployments**, covering installation, configuration, and user training to ensure smooth go-live.
4. Improved application performance by reducing launch time from **3s to 1s**, stabilizing CPU usage at **~1.5%**, and lowering memory consumption to **~50 MB** through refactoring and optimization.

Environment: C#, Desktop Applications, UI/UX Optimization, Performance Tuning, On-site Deployment & Support

Formal Education

Polteknik Sahid Jakarta - Hospitality

Coursework Completed

2017 - 2020

**Politeknik Meta Industri - Teknik
Computer**

Coursework Completed

2021 - 2025

Skills

Programming Languages

C# (.NET), Golang, Python

Backend & Architecture

RESTful APIs, MVC Architecture, Onion Architecture, Object-Oriented Programming, Functional Programming

Databases

PostgreSQL, MS SQL, MySQL, MongoDB

Tools & Platforms

Git, Azure Services, Google Cloud Services, Jira, ClickUp, Figma, Draw.io, Crystal Report, Metabase
